

## Using Legacy's Matte Pack Additive

*Which products can I use Legacy's matte additive with?*

- HD6525-MMA Clear, Tinted & Opaque
- HD6600-MMA Clear, Tinted & Opaque

*When I order matte-gloss sealer, what can I expect?*

You can expect to receive (1) matte pack per 5 gal unit ordered. The user has to mix it in, it is not incorporated at the factory.

We only offer the matte-gloss option on 5 gal units. If you need less than 5 gal, please order the matte-pack separately. Link is found in "Tips" section of the products found above.

*Application Instructions (important)*

The matte additive is only recommended for the last coat. Using this in all coats has the potential to cause bonding and/or finish issues between coats.

If you want to add another coat over a matte coat, you will have to use the same sealer without the additive. Once this coat of sealer is applied, another coat of matte fortified sealer can be added, if desired.

*Mixing*

Each matte-pack will fortify up to 5 gallons of sealer. Follow the instructions on the label for proper dosage of lesser amounts.

Mix well, using a low speed drill and a properly sized mixing wand. Continue mixing until the additive is dissolved into the sealer and evenly distributed.

*This document is a guide only. Application and proper execution of this additive is the user's responsibility. Technical question? 888-652-0333 or email: [info@legacyindustrial.net](mailto:info@legacyindustrial.net)*
